Conservation Biology for All Navjot S. Sodhi,Paul R. Ehrlich,2010-01-08 Conservation Biology for All provides cutting edge but basic conservation science to a global readership A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting edge conservation knowledge as widely as possible Important topics such as balancing conversion and human needs climate change conservation planning designing and analyzing conservation research ecosystem services endangered species management extinctions fire habitat loss and invasive species are covered Numerous textboxes describing additional relevant material or case studies are also included The global biodiversity crisis is now unstoppable what can be saved in the developing world will require an educated constituency in both the developing and developed world Habitat loss is particularly acute in developing countries which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found Sadly developing world conservation scientists have found it difficult to access an authoritative textbook which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest There is now an urgent need to educate the next generation of scientists in developing countries so that they are in a better position to protect their natural resources World Report on Road Traffic Injury Prevention Marjorie Peden,2008-09 Every day thousands of people are killed and injured on our roads Millions of people each year will spend long weeks in the hospital after severe crashes and many will never be able to live work or play as they used to do Current efforts to address road safety are minimal in comparison to this growing human suffering This report presents a comprehensive overview of what is known about the magnitude risk factors and impact of road traffic injuries and about ways to prevent and lessen the impact of road crashes Over 100 experts from all continents and different sectors including transport engineering health police education and civil society have worked to produce the report Charts and tables The Birth of NASA Manfred "Dutch" von Ehrenfried,2016-03-23 This is the story of the work of the original NASA space pioneers men and women who were suddenly organized in 1958 from the then National Advisory Committee on Aeronautics NACA into the Space Task Group A relatively small group they developed the initial mission concept plans and procedures for the U S space program Then they boldly built hardware and facilities to accomplish those missions The group existed only three years before they were transferred to the Manned Spacecraft Center in Houston Texas in 1962 but their organization left a large mark on what would follow Von Ehrenfried s personal experience with the STG at Langley uniquely positions him to describe the way the group was

structured and how it reacted to the new demands of a post Sputnik era He artfully analyzes how the growing space program was managed and what techniques enabled it to develop so quickly from an operations perspective The result is a fascinating window into history amply backed up by first person documentation and interviews
